

## *Curriculum Vitae 2021*

### **Professor Conor C Murphy**

MB BCh BAO (Hons), MMedSc (Hons), PGCert (TLCP), FRCSI, FRCOphth, PhD

Irish Medical Council Registration number 20332

Professor Conor Murphy is the Chair and Professor of Ophthalmology at the RCSI University of Medicine and Health Sciences and a consultant ophthalmic surgeon at the Royal Victoria Eye and Ear Hospital in Dublin. He specialises in uveitis, disorders of the cornea and ocular surface and corneal transplantation. He heads the Ocular Immunology Research Group at RCSI, which focuses on research into dry eye disease and ocular surface inflammation, corneal transplantation and uveitis. As post-graduate Professor of Ophthalmology, Professor Murphy is also the Chief Examiner of the postgraduate MRCSI and FRCSI examinations in ophthalmology in Ireland.

### **Current position**

Professor and Chair of Ophthalmology, RCSI University of Medicine and Health Sciences 2009 -  
Consultant Ophthalmic Surgeon, Royal Victoria Eye and Ear Hospital, Dublin 2009 -

### **Education and qualifications**

- 1996 MB BCh BAO (Hons), University College Dublin, Ireland
- 1998 MMedSc in Physiology (Hons), University College Dublin, Ireland
- 2000 FRCSI (Ophthalmology)
- 2001 MRCOphth (UK)
- 2005 PhD in Ocular Immunology, University College Dublin, Ireland
- 2007 FRCOphth (UK)
- 2008 Postgraduate Certificate in Teaching and Learning in Clinical Practice, University of Chester and Edge Hill University, United Kingdom
- 2008 Certificate of Completion of Training UK (CCT, awarded 8<sup>th</sup> April 2008)

## Summary of key clinical, academic and governance roles

Co-director of Year 4 of Medicine, RCSI University of Medicine and Health Sciences 2020-  
Undergraduate and postgraduate Professor of Ophthalmology, RCSI 2009-  
Chief examiner of the MRCSI (Ophth) and FRCSI (Ophth) examinations 2009-  
Co-chair of the Learning Environment Development Committee RCSI 2019-  
Member of the Board of the Royal Victoria Eye and Ear Hospital Research Foundation 2009-  
Member of the Academic Council, RCSI 2009-  
Principle Investigator, Department of Pharmacy and Biological Sciences, RCSI 2009-  
Irish representative of the European University Professors of Ophthalmology Council 2018-  
Academic member of Irish College of Ophthalmologists Manpower and Training Committee 2009-  
Founding committee member of the Irish Regional Ophthalmic Anaesthesia Society 2009-  
Member of the European Cornea Conference, Bowman Club, American Academy of Ophthalmology,  
Association for Research in Vision and Ophthalmology (ARVO), and Irish College of Ophthalmologists

Chairman of the Department of Ophthalmology, Royal Victoria Eye and Ear Hospital 2018-2020  
Member of the Board of Beaumont Hospital, Dublin 2017-2020  
Chairman of the Governance and Risk Committee of Beaumont Hospital 2017-2020  
Medical Director of the Royal Victoria Eye and Ear Hospital 2013-2016  
Director of Education and Research of the Royal Victoria Eye and Ear Hospital 2010-2013  
Member of the Medical and Health Sciences Board, RCSI, 2015-2018  
Member of the Opticians Board of Ireland 2010-2015

## Description of research interests

### 1) Primary Sjögren's Syndrome Research

Primary Sjögren's Syndrome (pSS) is an autoimmune disease that destroys the specialised secretory glands that produce saliva and tears, causing dry eyes and dry mouth as well as generalized symptoms of aches, pains and lethargy. There is currently no cure for pSS and the exact cause is unknown. In this study we are expanding our understanding of this disease at a molecular level by investigating the epigenetic control of inflammation mediated by microRNA, tiny RNA genes that act as a switch for biological processes like inflammation. We are measuring microRNA in blood immune cells and ocular surface cells as well as examining tear samples for inflammatory mediators. As well as aiming to identify biomarkers of disease, this study is focussed on developing new nanoparticle based therapeutic agents that inhibit inflammation by exploiting microRNAs expressed on the surface of the eye. It forms part of the PhD thesis of Dr Emily Greenan, Clinical Tutor and PhD candidate, RCSI.

### 2) Graft versus host disease research

Graft versus host disease (GVHD) is a severe immune reaction to stem cell transplant therapies for haematological disorders, most commonly blood cell cancers. One of the most severe manifestations of GVHD is ocular surface inflammation and dry eye disease. As the main focus of Dr Greenan's PhD thesis, our work aims to improve the detection and treatment of ocular GVHD and enhance our understanding of the epigenetic control of inflammation of the surface of the eye in this condition. This project is supported by a strong collaboration with the Department of Haematology and the national haematology stem cell transplant centre at St James' Hospital.

### 3) Acute anterior uveitis research

Acute anterior uveitis (AAU) is characterised by the acute onset of inflammation in the front compartment of the eye, leading to pain, light sensitivity and blurred vision. We have defined, in an Irish Cohort, the clinical characteristics of AAU and have established a simple algorithm called the DUET algorithm for the rapid detection of spondyloarthritis in patients with AAU. We are also investigating the molecular mechanisms of this disease, in particular the role of dendritic cells and microRNA in the pathogenesis of AAU. Following the recent publication of our work on microRNA in AAU, we are currently studying a larger cohort of patients to explore the role of microRNA in both blood immune cells and the aqueous humour of the eye in HLA B27 positive and negative patients. This work is being undertaken by Dr Esraa Hegazy, Clinical Lecturer in Ophthalmology, in collaboration with the Department of Rheumatology at St Vincent's University Hospital, Dublin and UCD.

### 4) VISICORT corneal transplantation research

VISICORT is a multi-disciplinary research project involving 12 partners from across the EU with expertise in corneal transplantation, cell therapy, immunology, bio-sampling, systems biology/immune profiling and bioinformatics. The project will complete the first ever systematic immune profiling of human corneal transplant recipients. Clinical data and bio-specimens from over 900 corneal transplant recipients at 5 leading transplant centres, including the Royal Victoria Eye and Ear Hospital and RCSI, have been centrally collated and distributed to cutting-edge laboratories where multi-platform profiling and integrated bioinformatics analyses are underway. Profiling data will generate a better understanding of corneal transplant rejection and failure. This knowledge will be used to develop novel biomarker-based surveillance strategies and, coupled with SME-based expertise in cell product development, will also inform the design and initiation of an optimised clinical trial strategy of immunomodulatory stromal stem cell therapy in high-risk human corneal transplant recipients. The project is being coordinated by Prof Matt Griffin, Professor of Transplant Biology at NUI, Galway. Benefitting from a €6 million award from the European Commission, the project launched in May 2014 and will be completed in April 2021. There has been a strong commitment and contribution to this project from the Royal Victoria Eye and Ear Hospital and we look forward to being able to achieve better outcomes for our patients in the future. See [www.visicort.eu](http://www.visicort.eu)

### 5) Fuch's corneal dystrophy and Keratoconus

This project will undertake an in-depth study of two of the most common corneal conditions, keratoconus and Fuch's Endothelial Corneal dystrophy, using a unique multi-omics approach. The aim is to profile families of proteins, lipids and metabolites, using state-of-the-art mass spectrometry techniques, and provide new insights into disease pathogenesis and progression by analysing different eye tissue samples from the same patient at different time points. Professor Murphy is a co-investigator on this project which is being undertaken at the University of Edinburgh.

### 6) National Uveitis Registry

Prof Murphy has recently received funding support to set up a national registry of patients with uveitis. With the help of this registry, we hope to identify epidemiological trends, audit treatment outcomes and deliver effective laboratory, clinical and health service research with the overarching aim of improving outcomes for patients with uveitis.

7) Giant cell arteritis

Prof Murphy is Principal Investigator on a multi-centre study aimed at improving outcomes in giant cell arteritis through multidisciplinary collaboration. We are studying novel imaging strategies and pathogenic mechanisms of GCA using an ex-vivo temporal artery culture model. This work is being undertaken in collaboration with the Department of Rheumatology at St Vincent's University Hospital, Dublin and UCD.

8) National Corneal Transplantation Registry

Prof Murphy and colleagues set up this registry in 2011 to help audit outcomes of corneal transplantation in Ireland and to identify health service needs in the area of complex corneal disease.

## Grant awards

2020 Royal Victoria Eye and Ear Hospital Research Foundation. "Establishing 2D and three-dimensional models of inflammatory dry eye disease to test novel microRNA therapeutics in human conjunctival epithelial cells" (Dr Emily Greenan, Clinical Research Fellow/ Clinical Tutor, RCSI; €7,500)

- 2019 Royal Victoria Eye and Ear Hospital Research Foundation. "Multiomic profiling of ocular inflammation in dry eye disease" (Dr Emily Greenan, Clinical Research Fellow/ Clinical Tutor, RCSI; €15,000)
- 2018 Royal Victoria Eye and Ear Hospital Research Foundation. "Targeting ocular inflammation in dry eye disease with novel microRNA-based therapeutics" (Dr Emily Greenan, Clinical Research Fellow/ Clinical Tutor, RCSI; €15,000)
- 2018 AbbVie. "Development and implementation of a National Uveitis Registry". (Prof Conor Murphy, €84,000)
- 2018 Santen. "Effect of Ikervis on cytokine and microRNA profile at the ocular surface in severe keratitis due to dry eye disease" (Prof Conor Murphy; €45,000)
- 2018 Irish College of Ophthalmologists/Novartis annual research award. "Targeting ocular inflammation in dry eye disease with novel microRNA-based therapeutics" (Dr Emily Greenan, Clinical Research Fellow/ Clinical Tutor, RCSI; €35,000)
- 2017 Royal Victoria Eye and Ear Hospital Research Foundation. "Profiling miRNA expression in acute anterior uveitis" (Dr Christine Goodchild, Clinical Research Fellow, RCSI; €15,000)
- 2016 Irish College of Ophthalmologists/Novartis annual research award. "Utilising microRNA-based therapeutics for the development of novel targeted drug delivery device for patients with dry eye disease" (Dr Sinead Connolly, MCh candidate; €17,500)
- 2015 Royal Victoria Eye and Ear Hospital Research Foundation. "Utilising microRNA-based therapeutics for the development of novel targeted drug delivery device for patients with dry eye disease" (Dr Sinead Connolly, MCh candidate; €15,000)
- 2014 Private donor. "Targeting inflammation in Sjögren's syndrome—novel microRNAs as potential therapeutics". (€27,000)
- 2014 Health Research Board/ Medical Research Charities Group "Restoring immune balance in patients with primary Sjögren's syndrome by modulating microRNA expression" (€40,000)
- 2014 RCSI Seed funding call "Modulating microRNA expression as a means to restore immune function in patients with primary Sjogrens Syndrome" (€30,000)
- 2013 ICO/Pfizer Research Fellowship "Acute anterior uveitis in an Irish Cohort: clinical characteristics and molecular mechanisms" (Dr Micheal O'Rourke, €35,000)
- 2013 EU FP7 grant Award. Partner in VISICORT: Adverse Immune Signatures and their Prevention in Corneal Transplantation (Prof Conor Murphy €400,000; total consortium: €6 million)
- 2012 Health Research Board/ Medical Research Charities Group: "Profiling Toll-like receptor responses in patients with primary Sjögren's syndrome" (€50,000)
- 2011 Royal Victoria Eye and Ear Hospital Research Foundation: "Acute anterior uveitis in an Irish Cohort: clinical characteristics and molecular mechanisms" (Dr Micheal O'Rourke, €30,000)

- 2011 Irish College of Ophthalmologists/Pfizer Research Fellowship: “Targeting toll-like receptor pathways in the treatment of HSV-1 keratitis” (€35,000)
- 2010 RVEEH Research Foundation: “Evasion of the innate immune response by HSV-1 in the cornea: molecular mechanisms mediating interferon downregulation and virus survival” (€20,000)
